

# A Quick Guide.....

## To hot tub maintenance

You will need to test the spa water prior to making any adjustments and this is very easily done with InstaTest4+ Test Strips, they give you readings for sanitiser level, pH, Total Alkalinity and Water Hardness, in about 20 seconds.

**Daily (before use):** approx' 2 minutes.

### Check the Sanitiser Level:

This is the amount of Bromine in the water and should be between 3 to 5 ppm (mg/l) dose accordingly, with Bromine Tablets (in a floating dispenser) or Granules.

### Check the pH reading:

This should be slightly alkaline and be between 7.2 and 7.6. If it is not within these parameters use **AquaSParkle pH Plus** or **pH Minus** to adjust.

If there is slight foam on the water surface, scoop off with a piece of cardboard, or treat with **AquaSParkle FoamAway** and clean the water line with **AquaSParkle Spa Surface Cleaner**.

**Weekly:** approx' 10 minutes.

### Shock the Hot Tub water:

With **AquaSParkle Non Chlorine Shock** and run the pumps, (**cover off**) for 30 mins. This helps with sanitiser function and removes contaminants to give sparkling, clear, water.

### Clean the Filter:

With a hose pipe water jet, or a **Cyclone Filter Cleaner**, use spray-on **Instant Filter Cleaner** if heavily soiled.

### Control Hard Water Scale Build Up:

Add **AquaSParkle ScaleAway** to prevent scale deposits building up in your spa, when the water hardness is above 200 ppm.

**Monthly:** approx' 10 minutes.

### Deep Clean the Filter:

With **AquaSParkle Immerse Filter Cleaner** soak the filter overnight in a suitable container and exchange with your spare, dry filter.

### Rapid Shock:

Add **AquaSParkle Rapid Shock** and run the pumps, (cover off) for 30 mins. This is a very fast acting sanitiser and ensures that residual bacteria are destroyed, to keep your spa extra safe.

**Every 3 Months:** approx' 90 minutes.

### Change the Spa Water:

Add **Spa System Flush** to the Hot Tub water, run the pumps for 10 mins, then allow to soak overnight. The next day run the pumps on full power for 60 minutes, then drain the water. Clean the spa shell interior and the underside of the cover with **AquaSParkle Spa Surface Cleaner**. Treat the topside of the hot tub cover with **Protectant 303**. Add clean filtered water, Balance and Sanitise.
