

SpaCare – Deep Clean

Professional Spa Service & Deep Clean
From The Experts.....

The **SpaCare Deep Clean** is the most comprehensive and professional maintenance service available in Portugal and ensures your spa keeps running efficiently with minimises potential breakdowns.

WHAT WE DO:

1. Remove the Filter, check condition and deep clean.
2. Add BioFilm Eliminator (a very powerful form of Chlorine – 10 times stronger than Pool Chlorine) to destroy bacterial colonies and mineral deposits, circulate for up to 4 hours.
3. Check the spa plumbing for leaks and integrity, including all seals and gaskets.
4. Check the operation and condition of all controls, pumps, valves and wiring.
5. Check all jets for satisfactory operation and integrity of seal to the spa body.
6. Add Spa System Flush (a powerful blend of surfactants and enzymes) to remove stubborn grease, body fats and chemical deposits from deep within the spa plumbing, circulate for 1 hour.
7. Drain the water from the spa.
8. Clean and sanitise the spa interior surface.
9. Refill with clean filtered water.
10. Test the water for; Total Alkalinity, pH and Hardness
11. Adjust the water balance prior to sanitising.
12. Add Rapid Shock Treatment to eliminate residual bacteria.
13. Clean the underside of the Spa Cover and treat the topside with Protectant 303.
14. Establish the sanitising system.
15. Re-check the operation of all spa functions from the top side controller.
16. Clean the hot tub exterior and hose down the immediate area.

You should then find that your weekly maintenance is limited to;

Checking and adding Bromine Tablets to your dispenser, or dosing with Bromine Granules.

Adding Non-Chlorine Shock to reactivate spent Bromine and clarify the spa water.

... Then periodically:

Clean your Filters.

Check the water balance.

Clean and condition your Spa Cover.
